

Pool Heating

The Skyline Energy SK-P Series Heat-Pumps

Affordable Luxury

A swimming pool promotes health and fitness, and can be great fun for you and your family and friends.

When its hot out there the pool can look soooo . . . inviting but without even just a little heating to take the cold edge off the reality can be somewhat less satisfying.

When the water is cold, chances are you won't even take the cover off . . . **what a waste!**

You deserve the best

With a quality heat-pump pool heater, you can efficiently and economically heat that pool to your desired temperature, and enjoy it all year round.

Unlike traditional pool heaters, our heat-pump water heaters uniquely extract solar energy from the air, yet do not require solar collectors on your roof.. They work very efficiently, save energy, and therefore cost much less to run than alternatives.

Featuring ultra quiet high efficiency scroll compressors, reverse-cycle de-ice, multiple fans to minimise air discharge noise, optional titanium heat-exchanger, (10yr warranty),

. . anything else would be a compromise!

Available from 20kw single phase to 250kw 3phase output, we have a wide range of models to suit your pool/spa application.

Provide us with the details of your pool and your heating desires. We'll put it through our computer model and provide you with an assessment of running costs and a no obligation quote for the right model for you to maximise the enjoyment of your pool.

What are you waiting for ?
