

SOLAR/GAS HOT WATER

Gas & LPG water heaters with the latest evacuated tubes

Replacing a gas or LPG water heater?

Let us help you select the ideal model from our range of evacuated-tube solar systems.
(for new homes and electric changeovers - consider our range of sensational heat-pump systems)

Performance:

- Latest Evacuated Tube technology.
- Provide up to 40% greater efficiency than flat plate solar systems.
- The cylindrical tube design provides passive sun tracking continually throughout the day.
- The insulating vacuum retains up to 97% of the harnessed thermal energy, providing excellent cold weather performance and frost protection down to minus 20°C.

Benefits:

- Reduce your hot water energy costs.
- Reduce your carbon footprint by becoming more energy independent.
- Reduce your environmental impact.

Why these particular systems:

- Through independent testing and development, they offer the latest in solar thermal technology.
- They use the highest quality components and can offer one of the longest warranties on the Australian market.
- They comply with all Australian and International standards.

Value for money:

- These systems are eligible for both Federal and State Government rebates, as well as Renewable Energy Certificates (REC's)

Delivery & installation costs:

- Typical delivery & installation costs are about \$1000 to \$1500 on top of the unit cost price.
